

## CHIMERA

(based on McLaren 12C)

It goes without saying that during the development of the 12C CHIMERA aerodynamic efficiency and weight optimisation was number one. The chassis components made of ultra-light carbon GFK composites were perfectly coordinated. The result: A lift-reducing individual design in perfect surface quality.

One component of the body kit is the sporty, dynamic front spoiler. The integrated front spoiler is made from visible carbon-fibre and channels the air to the vents, letting the car appear even lower to the ground. A striking eye-catcher and aerodynamic manipulation is the innovative wind splitter on top of the engine hood. An optical link between the front and rear are the 4-component side skirts made of visible carbon-fibre. Not only do they provide a significantly calmer airflow, but together with the carbon-made air intakes along the sides, they give the 12C CHIMERA its powerful looks, even when simply parked on the street corner. FAB Design designed a triple-flow exhaust pipe, especially for the new rear apron. The FAB rear diffuser made of carbon generates additional output power to the rear axle.

Additional visual carbon-fibre components, such as the artfully crafted air box, bring the aerodynamic package to a full circle.

## CHIMERA

(based on McLaren 12C)

One might expect that the interior values play a secondary role. Wrong! The 12C CHIMERA presents sophisticated, superior technology, offering driving pleasure for those with the highest standards. Especially for the 12C CHIMERA demands, FAB Design offers a tried and tested combination for a much improved handling and exclusive look of the car. The three-part FAB Evoline wheel, available in the dimension 9.0 x 20"VA and 10.5 x 21"HA, gives the car its aggressive appearance. The tyres, available in sizes 235/35 R20 and 305/25 R21 guarantee optimum grip and improved road handling.

Even more importantly, the FAB exhaust gas system generates an additional power of 15 HP and therefore, hones the sporty gene of the 12C CHIMERA.

As supplement to the existing factory-offered interior equipment, FAB Design replaces numerous production parts with orange-coloured carbon components. Decorative, orange stitching completes the interior of the 12C CHIMERA. Upon request, FAB's own upholstery department can produce anything of your heart's desires. From personalised foot mats to a complete leather interior, produced with the highest degree of craftsmanship and precision.
