

TERSO SPYDER

(based on McLaren 12C)

For over 20 years FAB Design has created individual small series runs and unique one offs from exclusive base vehicles. This time the designers and developers have created a model named TERSO. The basis was provided by the McLaren MP 12C, but the Swiss have taken it and and created a completely new car that only reminds one to a limited degree of the British super sports car.

The front is marked by a front skirt with large air intake valves, which after the motto „Form follows Function“ supplies the cooling system with fresh air. The sides of the designer bumpers flow into the imposing forms of the wider wheel arches with the distinctively stylish air intake valves for the engine's central cooling system that frame the Elegant FAB Design Evolution three-part forged wheels.

The aerodynamically perfectly formed sills complete the sporty sidelines of the TERSO before they uninterruptedly end in the equally wider designed rear wings of this super sports car. The transfer over to the newly designed rear is just as smooth. It not only has characteristic vent openings but also a diffuser that when it comes to combating lift at high speed supports the extendible rear wing.

TERSO SPYDER

(based on McLaren 12C)

In addition FAB-Design has mounted another adjustable but fixed rear wing on the rear hood that as required can be mounted or removed with only a few hand movements.

A further highlight on this FAB Terso can be found in the aforementioned 3 part, 20 inch large Evolution complete wheels that are fitted on the front axle with 10inch 275/25ZR20 and on the rear axle with 12 inch 325/30 ZR20. The 5 hole design, the concave shape and the delicate spokes harmonise perfectly with the classic sports silhouette.

At the rear of the vehicle a FAB stainless steel sports exhaust mounted above the skirt with a 3-chamber carbon tail pipe lets the exhaust fumes sonorously free. The FAB developers are naturally also improving the performance and thereby currently achieving a regular performance of 680 PS – instead of the production line 600 PS that the V8 would otherwise send to the wheels. On top of this the engine's torque increases to a full 715 Nm. This means the Terso can sprint to 100 km/h in just 3 seconds and reach a top speed of around 343 km/h.

(based on McLaren 12C)

Naturally FAB can also individualise the interior. For this the customer has the choice of all imaginable materials such as, for example, leather, alcantara, carbon or aluminium.

A special highlight is the secure rear storage compartment with special surround. This means that even when braking on the race track everything stays in its proper place. So that the passengers also safely stay in their seats the production line car seats have been replaced by sports seats with greater side support. In his hands the driver grasps a sports driving wheel covered in leather that allows a really tight grip.

In the evenings a sophisticated ambient light system lights the interior and feelings of the passengers.

This lets the FAB-Design Terso enjoy an individual exclusivity that makes it one of the icons in its super sport car class. It skillfully unites design, luxury and sportiness in one vehicle.
