

## DESIRE

(based on Mercedes-Benz McLaren SLR)

From the FAB Design high-performance engine which generates an unbelievable performance of 750hp and a maximum torque of 1,080Nm to the perfectly designed FAB Design interior – nearly any relevant part of the Mercedes super sports car has been customised and brought to perfection with the highest level of technical expertise by the FAB Design specialists.

The FAB Design body which has been redesigned by the Swiss specialist for this very exquisite masterpiece is made of ultra sturdy but extremely light and precious carbon which is produced in an autoclave – as is the case in aerospace industry and in Formula 1 – and in accordance with highest quality standards.

At several exposed spots, the material is even visible since it has been clear varnished in order to set spectacular accents. Apart from the front and rear fenders, it also comprises new and exclusive FAB Design side skirts with special recesses for the FAB Design high-performance sports exhaust system whose pipes come out on the vehicle's sides as is the case with the standard SLR. The completely redesigned motor sports front apron as well as the reshaped bonnet which is adapted to the style of the new front side and to the wider fenders are further exclusive absolutely harmonious silhouette.

## DESIRE

(based on Mercedes-Benz McLaren SLR)

This is the reason why the FAB Design specialists had the idea of creating something very special for the vehicle's rear end. The rear panel, completely redesigned by FAB Design, frames a huge diffuser which reduces the lift force. At the same time, the optionally available FAB Design rear wing spoiler increases the downforce at the rear axle without affecting the functionality of the brake assist inside the rear lid.

The result is a considerable improvement of driving dynamics and, thus, also of the driving safety at high and peak speeds which the FAB Design DESIRE will reach in the twinkling of an eye thanks to its enormous engine performance.

The FAB Design specialists have achieved a further significant improvement of driving characteristics by installing their special sports suspension and by equipping the vehicle with huge forged FAB Design 20" wheels which are provided with special performance 265/30ZR20 and 325/25ZR20.

In the first place, the interior equipment impresses with the way it harmonises with the vehicle's colour. The interior is completely composed of black FAB DESIGN leather. The specially developed pearl white and black FAB Design crocostyle leather sets additional stylish accents. The FAB Design interior emphasises the appearance of the DESIRE with race character and elegance

## DESIRE

(based on Mercedes-Benz McLaren SLR)

In order to make sure that the FAB Design Desire will not be taken for a toothless tiger, the FAB Design specialists have focussed all their expertise and experience on the super sports car's powertrain.

Thanks to extensive modifications of the engine periphery and of the hard and software, the FAB Design high-performance powertrain now generates 750hp instead of the standard SLR's 626hp. The maximum torque has been increased from 780Nm to 1,080Nm.

The result of all those efforts: The FAB Design DESIRE reaches a regulated top speed of 310 km/h and passes the 100 km/h mark in 3.6 seconds.

This breathtaking demonstration of engine force is, of course, rounded off by the infernal sound of the FAB Design high-performance sports exhaust system's total number of six tailpipes.

With the SLR DESIRE, FAB Design has made another impressive statement of its special class in the field of high-end luxury car customisation.
